

PRESS RELEASE

Date: 25 January 2012

Title: BCM Upgrade IT System

BCM have recently embarked on a full system upgrade for their in-house IT systems. The new system embraces Cloud based computing and enables BCM to access their documents, management and accountancy programmes where ever they are. The system has been designed and implemented by Backbone IT support, based in London.

Andrew Bays, Managing Partner of BCM comments; "We seek to remain true to our corporate identity which is "modern thinking, traditional values". In terms of the former, it is vital that we keep our IT systems as up to date as possible.

The new system we have implemented enables our staff to have fast access to our suite of IT solutions including our digital mapping, farm/estate/lettings management, accounts, payroll and architecture design programmes, enabling us to be able to access these management tools both in the office and from wherever we are throughout the country. This is particularly useful where we have members of staff who spend days or part days on farms/estates which we manage and also enables more flexible working procedures such as home working.

Andrew Bays comments further: "We continue to strive to be at the forefront of IT implementation in our sector and the functionality of the new system together with the improved data protection and back up capability means that this is significant improvement in our efficiency and delivery of client services".
